

Instructions

Directions for use:

Weekly Maintenance

1. Add 1 oz of Spa Phosphate Remover weekly to 500 gallons of hot tub water to keep phosphates low.
2. For high phosphate (levels of 1,000 ppb or more, add 3 oz and test for phosphate levels the following day. Recommended phosphate levels in a hot tub are below 125 ppb.
3. Follow immediately with 2 oz of Clarify for Spas and run filter for two hours.
4. Clean cartridge after treatment is complete.

Note: Spa Phosphate Remover may cause spa water to become white and cloudy. This is normal and is a sign that the product is working. To clear the water quickly, use 2 oz Clarify for Spas with the filter running.
